

# Crestwood Calculator Policy

***The school expects each student to bring and use their OWN scientific calculator.***

*Students should be encouraged to estimate the approximate answer first and then use the calculator to check the reasonableness of their answer.*

*Calculators **may** be used when working with real data, possibly involving very large, small or decimal numbers, which might otherwise restrict their progress in a lesson.*

***Don't rely on your calculators!***

*It's what you type **IN** that counts! Understand the method and the question becomes easy.*
